Extrapolating the Trade Data

We can make the assumption that the rate of yearly growth remains the same for across countries

$$W_0 - World trade number 1984$$

$$W_1 - World Trade number 2013$$

$$W_1 = W_0(1 + r/100)^n$$

$$n = 29 in this case$$

Use the value of r to find numbers for 2013 for the countries for which data is missing
